

## SERVERLESS Architecture

By: phuongch4@fpt.com

1. User's requests are reservered by R53, network traffic is routed to infrastruture in AWS
2. Static contents are delivered by CloudFornt
3. First user authenticate by Cognitor user pools, then authorize by Cognito to obtain temporary credentials to call API Gateway.
4. Requests come to API Gateway that can be transformed and passed through to the backend service logic.
5. AWS Lambda provides backend bussiness logic for Web Application.
6. DynamoDB provides data layer for Web Application.
